What are the benefits of cloud-based time & attendance for your industry?

Businesses in diverse industries are benefiting from the latest technology in employee time tracking:

cloud-based time and attendance systems. Healthcare practices, hospitality companies and service corporations are among the many industries using cloud-based time and attendance.

HOSPITALITY	HEALTHCARE
SERVICES	RETAIL

Many like the time-saving features, whether it's cutting down on mounds of paperwork in a medical practice, to hospitality managers viewing employee time and attendance information from different locations anytime, anywhere.

Healthcare Industry

For most administrators and supervisors within medical practices, keeping up with insurance, billing and compliance can be time consuming, so they need an employee time keeping process for payroll that is streamlined and effortless. Cloud-based timekeeping is the answer, since it is designed to eliminate the tedious and error prone task of manually tracking employee time.

Prior to switching to PayClock® Online a cloud-based employee time and attendance solution, Meagan Bottrell, billing supervisor for Surgical Associates of Traverse City, used a mechanical time clock with paper time cards to track employee time.

"Payclock Online has greatly improved our payroll process," she said. "Before, I used a pencil and calculator to add staff hours. As you can imagine, this was very time consuming. With PayClock Online, my payroll processing time has been greatly reduced."

> ## "The system tells them how many hours they've accumulated to date, and if there's a discrepancy, it can be resolved early. All sides are happy.
> – Michael Vassell
> General Manager
> Holiday Inn Express
> Tavares, Florida

Hospitality Industry

For hotel general managers, managing employee time can be a headache, especially since most managers are on the go, traveling from one location to another. Many often get calls about a discrepancy in worked hours or time off and have to take care of the situation when they get to the specific property location. Cloud-based time and attendance tracking offers flexibility in managing employee time and payroll information remotely, wherever a manager is located.

Michael Vassell, general manager of Holiday Inn Express in Tavares, Fl., can now access employee time records and information any time, day or night, make changes, resolve issues and integrate data into his payroll system.

"Employees love it," Vassell said. "The system tells them how many hours they've accumulated to date, and if there's a discrepancy, it can be resolved early. All sides are happy."

Services Industry

Managing field-based workers is a challenge for many service-based industries that deploy employees to various customer locations day and night. Cloud-based timekeeping lets service workers clock in on mobile devices, saving time and ensuring accuracy instead of relying on manual input.

"Our workforce is remote," said Phelia Smith of Antelope Sales and Service Inc., "so PayClock Online makes it easy to manage the time records of our team out in the field in four different states, at any time of the day or night. It's so easy to use — from clocking in and out to making payroll — I absolutely love it."

Your Industry

All industries can benefit by using biometric employee time clocks such as Lathem's FaceIN face recognition time clock with cloud-based features to avoid the costly expense of buddy punching, when employees clock in and out for each other.

PayClock Online Special Offer!

For a limited time Lathem is offering special discounts to switch to PayClock Online. Special offers are available now.
